

Please reject the National Association of Broadcaster's (NAB) petition 04-160. Weather and traffic reports should be made available to all radio broadcasters regardless of how the signal reaches the listener. I would also like to point out that the same scenario was played out between cable and satellite television broadcasts regarding local television stations. Why should I be punished, as an XM listener, for the poor quality of the local AM/FM stations in the area? There is a reason I pay for my radio broadcasts.....
